CEILING Pattern Diffusers

5 different styles to choose from

AirMate® is proud to introduce its new, low profile, Ceiling Pattern Diffuser design. It is sure to benefit the consumer in a variety of ways. The diffusers are less visible to the eye and are flush to the ceiling. A 30° angled design allows the air, as it is directed out, to adhere itself onto the ceiling for a longer period of time. They are available with or without a multi-shutter damper and the cores are welded for superior strength. The gasket material restricts noise and protects the diffuser from leaking air into unwanted places. The diffusers have a smoother damper operation because of their riveted construction, making them noise free. Plus, the resiliency is enhanced due to its extruded aluminum construction.

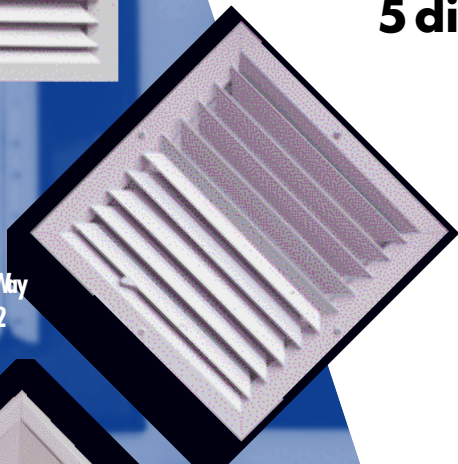

One-way, Two-way, Two-way Corner, Three-way Corner and Four-way Ceiling Air Patterns. If requesting a Ceiling Pattern Diffuser with multi-shutter damper the style number must be requested with an "M", such as "E1053 M".

Sizes include:

6" x 6", 8" x 8", 10" x 10", 12" x 12",
14" x 14"

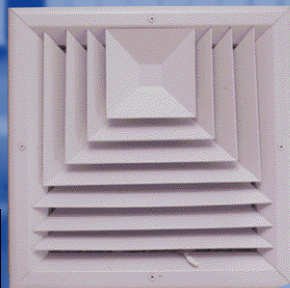

One-Way
E1051

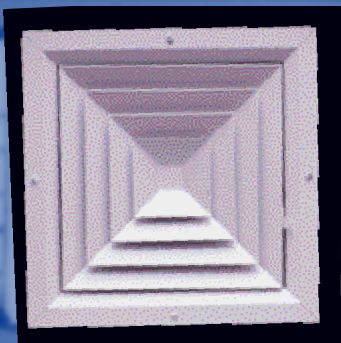

Two-Way
E1052

Two-Way Corner
E1050C

Three-Way
E1053

Four-Way
E1054
